Biographical / Historical

Herndon Dowling (1921 – 2015) was born in Cullman, Alabama, to Herndon and Ada Dowling. His father was the superintendent of public schools in Tuscaloosa, and his mother worked for

the Alabama Institute for the Deaf and Blind. Dowling grew up in Tuscaloosa, the oldest of the 3 Dowling children, and attended public school there until graduating from High School in 1938.

After high school Dowling attended the University of Alabama and graduated with a degree in biology in 1942. The same year he joined the U.S. Marine Corps as a commissioned officer and graduated officer training school in 1943.

In 1945 Dowling was stationed at Guadalcanal where his duties included interpreting aerial photographs of Okinawa Island, evaluating bomb sites, and eventually the collection of snake venom for the Navy. Dowling received a citation for excellent service for his work interpreting aerial photographs and was sent to Tianjin to assist with the Japanese surrender in that region in 1945. Dowling requested an honorable discharge in 1946, to continue his education, though he remained in the Marine Corps Reserves until 1959.

Upon being discharged from the active duty Dowling pursued his M.S. degree in Zoology at the University of Florida in Gainesville. His work there focused on the systematics of the Black Swamp Snake (Seminatrix pygea).

Dowling continued his studies at a Ph. D. program at the University of Michigan in the discipline of zoo-geography, with a focus on the systematics of the snake genus Elaphe in North America. Dowling completed his doctorate in 1951. He then went to teach at Haverford College, in Pennsylvania, for a year, followed by the University of Virginia's Mountain Lake Biological Station, and eventually the University of Arkansas. Dowling taught general biology, general zoology, as well as other related courses, and he introduced vertebrate natural history as a field course into the curriculum. Dowling left the University of Arkansas in 1959 because his contract was not renewed due to his refusal to comply with a newly enacted segregation policy at the university.

Dowling's next position was as Reptile Curator at the Bronx Zoo, a position he held from 1960-1967. During his time with the Bronx Zoo, Dowling traveled and researched extensively, conducting field work in such places as the Galapagos, Trinidad, and Martinique.

Concurrently, Dowling also held positions at the American Museum of Natural History (AMNH) in a grant funded capacity related to the generation of peer reviewed herpetological publications (1965-1973), as an adjunct professor at New York University (NYU) (1965-1973), and the University of Rhode Island (1964-1976). NYU eventually hired Dowling as an associate professor in 1973, and as a full professor in 1975. Dowling taught at NYU until his retirement in 1991. Dowling also eventually started his own journal, in 1973, called "Herpetological Information Search Systems" (HISS). During his career Dowling worked in many additional projects and positions in the field of herpetology, won over half a dozen awards for his work, and authored over 200 publications.

Scope and Content Note

The collection contains books (some oversized), research files containing drawings, journals, manuscript research, conference proceedings, specimens in jars and the cabinets, maps and drawings. These materials document Dowlings scientific career from the 1940s through the 2000s.

Generally, Dowling's "files" were kept in 4-drawer black file cabinets. The top draweres of 11 of his file cabinets were dedicated to files arranged by species name. These are processed in the Species Files series. The remaining file drawers remain unprocessed. The largest constituent grouping in this latter group are Dowlings Alphabetical Files. These are arranged by the last name of the scentist and they contain mostly article reprints but also include correspondence. The materials are boxed to precisely the demarcations of the file drawers. Where the contents of a file drawer exceed the capacity of a standard record center box, a smaller box is used to hold the overflow and is identifiable by a .l after the the box number. Unprocessed boxes are given a temporary box number assignment of ms059_files_##.

Dowling's personal library is also part of this Collection and an inventory to those titles is maintained separate from this finding aid. A list of titles may be found at: https://docs.google.com/spreadsheets/d/1psSudo8U1rj9f0s9uNmJ8hV28OtTfH15a_6f5za7suQ/edit?usp=sharing

Other miscellaneous materials that are part of Dowling's collection but boxed will be processed as resources allow.

General Files

General

These are materials that were in Dowling's file cabinets. Some contents of the file drawers may have been shifted and were not in the intended order upon accession to the WCSU Archives. These materials are only lightly processed and remain essentially in its original order but reboxed. Each box indicates the cabinet from which the materials eminated. The boxes have been assigned to some broad subseries

classifications (Couse materials, Research - Background, Field Work, Alphabetical files, and Published materials + manuscripts).
